Supplier scorecard for Suppliers to Groupe PSA - impact of the Coronavirus pandemic (COVID-19)

To All Certification Bodies,

The supplier scorecard for Suppliers to Groupe PSA (bidlist scoring) takes into account several elements and, as you already know, penalties are applied to these elements to obtain the final quality score.

For instance, the IATF16949 certification is considered by Groupe PSA Group as a key element of the supplier's performance and consequently penalties are applied for missing certificates (minus 15 points) or status other than issued (minus 25 points for withdrawn, minus 10 points for suspended certificates).

Nevertheless, due to the current unprecedented situation the automotive industry has to face, the supplier bidlist scoring and detailed associated scorecard (supplier plant sheet) may not be up to date in real time.

We therefore ask you, during IATF16949 monitoring or audit with your clients, to remain cautious in the use and interpretation of these data. You can consider these data as frozen since end of march 2020 unless your client can provide more accurate and recent information. We ask you to be focused on the management of claims and the follow-up our logistics program and quality level during the restart production to ensure the quality and the safety of the products produced.

Our current top priority is the safety, and well-being of everyone and to ensure safe restart of our activities.

Thank you for your continuing support of IATF16949.
