Introduction

1 Scope

1.1 General

This document defines certain customer-specific requirements (CSR) for FCA US LLC.

This document is also applicable to organizations supplying assemblies of production parts or materials ("modular suppliers") and to organizations supplying partially or fully assembled vehicles ("contract vehicle assembly plants").

The English language version of this document shall be the official version for purposes of third party registration.

Sanctioned translations of this document shall:

- Be for reference only.
- Reference the English version as the official language.
- Include FCA US LLC in the copyright statement.

Any other translations are not authorized.

NOTES

1. Customer specific requirements for FCA Italy SpA are contained in a separate document, available through the IATF web site: http://www.iatfglobaloversight.org/oem-requirements/customer-specific-requirements.

2. All published references to “FCA US”, “Chrysler” or “Chrysler Group LLC” applicable to these customer-specific requirements shall be interpreted as applying to all of FCA US LLC unless otherwise specified.

3. Comments or questions concerning this document may be sent to FCA US at iatf16949@fcagroup.com. (Please include the phrase “CSR ISSUE” in the subject line of the e-mail). Comments or questions on documents or standards cited within this document should be addressed to their respective authors.

1.2 Application

ISO 9001:2015, IATF 16949:2016 (as modified by Sanctioned Interpretations), and this document define fundamental quality system requirements for organizations contracted by FCA US to provide Production and/or Mopar parts and components. These requirements shall be included in any scope of registration/certification to IATF 16949 issued by an IATF-recognized certification body in order for the IATF 16949 certificate to be recognized as satisfying FCA US organization criteria for third party registration/certification. (See IATF 16949, Remarks for certification).
NOTE: The official list of IATF-recognized Certification Bodies can be found at https://www.iatfglobaloversight.org/certification-bodies/under-contract/.

All IATF 16949 requirements and the requirements of this document shall be addressed in the organization’s quality system.

Several section headers within this document are followed by the statement “No FCA US Customer-Specific Requirement for this section” to verify that there is no auditable FCA US-specific requirement for the section.

The presence of this statement shall not be interpreted to mean that other commercial or technical requirements do not exist for the subject addressed in the section, or that this statement supersedes existing commercial or technical requirements.

Unless explicitly specified, these requirements are not linked to the Customer-Specific Requirements (CSR) of any other management system standard required by FCA US. A nonconformance to a CSR of one standard does not imply that a nonconformance to another CSR exists. Specifically, a supplier who is not fully certified to ISO 14001 shall not receive a nonconformance from their IATF 16949 Certification Body.

This document is not applicable to organizations supplying Tooling and Equipment (T&E) to FCA US. T&E suppliers to FCA US shall be third-party registered to ISO 9001:2015.

Third-party registration

All organizations providing production parts to FCA US shall be third-party registered to IATF 16949:2016 through an IATF-recognized Certification Body. Certification requirements for organizations providing parts or materials to Mopar vary by type of material supplied. Table 1 summarizes these requirements:

<table>
<thead>

</tr>
</tbody>
</table>

NOTE: Transition was required by 9/14/18.
Organization identification as a FCA supplier

Organizations shall ensure that all Supplier Codes assigned to their manufacturing locations by FCA North America Purchasing and listed in the FCA Global External Balanced Scorecard (GEBSC) are disclosed to their Certification Body for inclusion in their IATF 16949 certification database record for FCA US LLC. The list shall include the codes assigned for both Production and Mopar areas.

NOTES:
1. Supplier Codes are labeled as Vendor Codes in GEBSC.
2. Supplier Codes issued by FCA Group Purchasing that appear in GEBSC should be included in the organization’s IATF 16949 certification database record for FCA Italy SpA.

Organizations and their CBs shall periodically review the FCA US Supplier Codes recorded in the IATF database to ensure that the list is complete and up-to-date. This review should occur annually at a minimum.

IATF 16949 registration verification

Organizations under contract to FCA North America Purchasing shall submit proof of registration by sending a digital copy (PDF) of their current registration certificate to FCA US at iatf16949@fcagroup.com. The submission email should list all FCA US Supplier Codes assigned to the site.

NOTES:
1. Unless the organization site experiences a change in certification status (see below), the verification record is valid for the life of the certificate. Periodic resubmissions within a certification period are not required.
2. It is no longer necessary to provide contact information when submitting proof of certification.
3. Organizations under contract to FCA Group Purchasing should submit proof of certification through SQP Systems, within the eSupplierConnect portal.

Notification of IATF 16949 Registration Status Change

Organizations shall notify FCA US of any change in their IATF 16949 registration status via e-mail to iatf16949@fcagroup.com. Such changes include, but are not limited to:

- Initial certification*
- Recertification*
- Transfer of certification to a new Certification Body*
- Certificate withdrawal.
- Certificate cancellation without replacement.

*These changes require submitting proof of registration as described above.
IATF 16949 Registration Exemption

FCA US may, at its option, fully exempt certain organizations from IATF 16949 registration. This exemption generally applies to those organizations whose automotive business is of such low significance that they will not register to IATF 16949, but are still needed as a supplier to FCA US.

Identification of candidate organizations for full exemption from IATF 16949 registration is the responsibility of FCA US Supplier Operations. Verification and maintenance of exemption status is the responsibility of FCA US Supplier Quality Operations.

NOTE: Unless otherwise specified, exemption from IATF 16949 registration does not relieve the organization of their obligation to abide by the quality requirements outlined in Clause 6 of the Production and Mopar Purchasing General Terms and Conditions.

Bulk Metallic Commodity Exemptions

Certain specific bulk metallic commodities are exempt from some requirements of this document. The details appear in Tables 5 and Table 6 of Appendix A.

NOTE: Exemptions only apply to these Customer-Specific Requirements, not to the sections of IATF 16949 with which they are aligned.

2 Normative References

2.1 Normative and informative references

References cited by this document are the latest versions available at the date of publication. When a cited document is revised after the date of publication, the newer version shall apply.

NOTE: If a conflict is perceived between a newer version of a cited reference and this document, contact FCA US at iatf16949@fcagroup.com for guidance. (Please include the phrase “CSR ISSUE” in the subject line of the e-mail.)

Supply Chain Management documents

Packaging and Shipping Instructions

NOTE: This document is located in the “Reference Material” section of the Production Part Suppliers page of the Supply Chain Knowledge Center.

2.1.B. Availability of references cited in these Customer-Specific Requirements

Government documents availability

European Union (EU) legal acts and related documents can be found within EUR-Lex (https://eur-lex.europa.eu/homepage.html).

Industry documents and applications availability

Automotive Industry Action Group publications are available from the AIAG at https://www.aiag.org/store/quality [(877) 275-2424].

Copies of International Organization for Standardization (ISO) publications are available from the ISO at http://www.iso.org/iso/store.htm [41 22 749 08 88].

IATF 16949 and the Rules are available from the select training providers listed on the IATF web site: https://www.iatfglobaloversight.org/iatf-publications/.

Minimum Automotive Quality Management System Requirements for Sub-Tier Suppliers for IATF 16949 (MAQMSR) are available from the International Automotive Task Force (IATF) at https://www.iatfglobaloversight.org/oem-requirements/customer-specific-requirements/

Sanctioned Interpretations are available at https://www.iatfglobaloversight.org/iatf-169492016/iatf-169492016-sis/.

FCA US documents and applications availability

Other referenced FCA US Engineering, Purchasing, and Supply Chain Management documents and applications are available through eSupplierConnect as noted in Table 2.

NOTES:

1. Assistance with eSupplierConnect is available through the home page ([http://www.esupplierconnect.com](http://www.esupplierconnect.com), under “Need Help?”).

2. Unless otherwise specified, applications and other materials referenced in this document as being available through eSupplierConnect are located in the “North America” section.

3 Terms and definitions

3.1 Terms and definitions for the automotive industry

NOTE: Numbers in parentheses identify first use of term in this document.

**3CPR (3rd Party Containment and Problem Resolution) (7.2.2)**

3CPR is a FCA US program for managing third-party containment and sorting of nonconforming components and assemblies when:

- The nonconformance is the organization’s responsibility.
- The nonconformance has escaped the organization’s control and potentially nonconforming material has left the organization’s site.

**Additional Quality Requirements (AQR) (8.2.3.1)**

AQR are documents attached to the Source Package that define particular requirements for specific material groups or processes. AQR documents are developed in accordance with SQ.00001.
Advance Quality Planning (AQP) (8.3.2.1)

Advance Quality Planning is a FCA US core process for product and manufacturing process development. It details the tasks performed by the Supplier and FCA US that ensure parts which meet all requirements are delivered on time to designated manufacturing facilities.

Appearance Master (1.2)

An appearance master is a physical property whose color, gloss, surface texture or appearance conforms to the specified appearance requirements.

Auxiliary Emission Control Device (AECD) (7.2.2)

Any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivateing the operation of any part of the emission control system. [ref. 40 C.F.R. § 86-1803-01]

Auxiliary Emission Strategy (AES) (7.2.2)

An emission strategy that becomes active and replaces or modifies a BES for a specific purpose and in response to a specific set of ambient or operating conditions and only remains operational as long as those conditions exist. [ref. EU Commission Regulation (EU) No 692/2008, as amended by Commission Regulation (EU) No 2016/646]

Base Emission Strategy (BES) (7.2.2)

An emission strategy that is active throughout the speed and load operating range of the vehicle unless an auxiliary emission strategy is activated. [ref. EU Commission Regulation (EU) No 692/2008, as amended by Commission Regulation (EU) No 2016/646]

Certification Body (1.2)

A firm recognized by the IATF to conduct audits to IATF 16949 and issue certificates to clients. FCA US only recognizes certificates issued by IATF-recognized Certification Bodies carrying the IATF logo and specific IATF number.

Consigned Part (8.4.1.3)

A purchased part or component released by FCA US Engineering (lineup code 00VAVX) and supplied to a tier one Supplier by a FCA US-managed Supplier. FCA US has full commercial control of the part or component (FCA US Purchasing issues the Purchase Order and Tool Purchase Order). FCA US controls the inventory and retains lead quality responsibility for life of the part or component.

Customer (1.1)

References to “customer” in this document shall be interpreted as FCA US for organizations who are third party registered or are pursuing third party registration to IATF 16949
Defeat device (7.2.2)

An auxiliary emission control device (AECD) that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless:

1. Such conditions are substantially included in the Federal emission test procedure;
2. The need for the AECD is justified in terms of protecting the vehicle against damage or accident; or
3. The AECD does not go beyond the requirements of engine starting; or
4. The AECD applies only for emergency vehicles and the need is justified in terms of preventing the vehicle from losing speed, torque, or power due to abnormal conditions of the emission control system, or in terms of preventing such abnormal conditions from occurring, during operation related to emergency response. [ref. 40 C.F.R. § 86-1803-01]

Design Verification (DV) (8.3.4.2)

Design Verification (DV) is a series of tests, inspections, and procedures that must be accomplished to determine if the design meets its intent.

Directed Part (8.4.1.3)

A purchased part or component released by FCA US Engineering (lineup code 35VDVS) and supplied to a tier one Supplier by a FCA US-selected Supplier. FCA US has partial commercial control of the part or component (FCA US Purchasing negotiates the purchase price and issues the Tool Purchase Order, if required). The tier one Supplier issues the part Purchase Order and controls the inventory. FCA US has lead quality responsibility for the part or component during product development and launch. The tier one supplier assumes lead quality responsibility for volume production and service use.

Essential Chemicals (1.2)

Bulk materials used in production vehicles and validated during vehicle development, which are packaged for service.

Global External Balanced Scorecard (GEBSC) (2.1 A)

The Global External Balanced Scorecard is a computer application used to store, analyze and report organization performance data collected from source systems deployed regionally or globally by the subsidiaries of FiatChrysler Automobiles NV. GEBSC reports are used by FCA US Purchasing to monitor organization performance and are an input to Purchasing procurement decisions.

Global Issue Management (GIM) (7.2.2)

A web-based computer application developed and used by FCA US to manage the corrective action process.
**Forever Requirements** (7.4)

The Forever Requirements are proactive communications from the organization to the customer about proposed product or process changes.

**IATF (International Automotive Task Force)** (1.2)

The IATF is an ad hoc group of automotive manufacturers and their respective trade associations, formed to provide improved quality products to automotive customers worldwide.

**Launch Inspection Program (LIP)** (9.2.2.4)

A proactive, third-party sorting activity applied to pre-production or production parts that Supplier Operations have identified as being at-risk for non-conformance. LIP is commonly deployed during the launch of a new vehicle program.

**Manufacturing**

“Manufacturing” includes partially or fully assembled vehicles.

**Marketing Chemicals** (1.2)

Service materials developed for aftermarket applications.

**Master Process Failure Mode and Effects Analysis (MPFMEA)** (8.2.3.1)

MPFMEA are document(s) attached to the Source Package defining lessons learned from previous issues and the corrective actions performed. MPFMEA are developed in accordance with SQ.00007.

**Material Management Operations Guideline /Logistics Evaluation (MMOG/LE)** (2.1.A)

The global standards for supply chain management processes that provide industry best practices. It is intended to establish a common definition of materials practices to facilitate effective communication between trading partners.

**Mopar Custom Shop** (1.2)

A facility that provides factory installation of accessories and direct vehicle delivery to dealerships.

**Oversight Office** (9.1.2.1)

An organization established by the IATF to implement and manage its IATF 16949 certification scheme. Oversight Offices manage all IATF-recognized Certification Bodies.

**Performance Parts** (1.2)

A brand of parts sold by Mopar. These special parts or systems are sold to the customer to enhance vehicle performance.

**Process Audit (PA)** (2.1.A)

The Process Audit is an activity during AQP for final approval of the Supplier’s manufacturing process.
Production Demonstration Run (PDR) (8.4.1.2)

Production Demonstration Run (PDR) is a demonstration of organization process capability and production capacity, using a timed production run (300 pieces or 2 hours) to calculate an effective line speed and First Time Capability (FTC).

Production Part Approval Process (PPAP) (2.1.A)

Production Part Approval Process (PPAP) provides the evidence that all customer engineering design record and specification requirements are properly understood by the organization and that the manufacturing process has the potential to produce product consistently meeting these requirements during an actual production run at the quoted production rate.

Production Validation (PV) (8.3.4.2)

Production Validation (PV) is a series of tests validating the production tooling, methods, and processes used to manufacture a component.

Remanufactured ("reman") Parts (1.2)

Parts produced by a formal process that salvages core material or used assemblies from the field and restores them into usable product. Salvaged core is combined with new parts, rework and repair to make a reliable assembly for resale. Remanufacturing processes are subject to Process planning meetings and Process Audits.

Sanctioned Interpretation (1.2)

A Sanctioned Interpretation (SI) is normative supplemental text issued by the IATF, which changes a rule or a requirement. SIs are issued for IATF 16949 and the Rules.

Site (1.2)

"Site" includes contract vehicle assembly plants.

Source Package (8.2.3.1)

The Source Package is the document used to communicate FCA US requirements to prospective Suppliers for a new part / program.

Supplier-Associated Warranty (10.2.5)

Warrantable vehicle service associated with dealer repair or replacement of organization-supplied parts or components. Association does not imply responsibility for failure. Responsibility for failure is determined after of root cause analysis of the failed part or component has been completed.

Valueline Parts (1.2)

A brand of maintenance service parts sold by Mopar as an alternative to OEM replacement parts.

4 Context of the organization
4.1 Understanding the organization and its context
No FCA US Customer-Specific Requirement for this section.

4.2 Understanding the needs and expectations of interested parties
No FCA US Customer-Specific Requirement for this section.

4.3 Determining the scope of the quality management system
No FCA US Customer-Specific Requirement for this section.

4.3.1 Determining the scope of the quality management system – supplemental
No FCA US Customer-Specific Requirement for this section.

4.3.2 Customer-specific requirements
No FCA US Customer-Specific Requirement for this section.

4.4 Quality management system and its processes

4.4.1
No FCA US Customer-Specific Requirement for this section.

4.4.1.1 Conformance of products and processes
No FCA US Customer-Specific Requirement for this section.

4.4.1.2 Product safety
Organizations seeking assistance with implementing product safety compliance processes that conform to United States government regulations should refer to the document *Model Vehicle Safety Compliance Program*, found in the North America References section on eSupplierConnect.

4.4.2
No FCA US Customer-Specific Requirement for this section.

5 Leadership

5.1 Leadership and commitment

5.1.1 General
No FCA US Customer-Specific Requirement for this section.
5.1.1.1 Corporate responsibility
No FCA US Customer-Specific Requirement for this section.

5.1.1.2 Process effectiveness and efficiency
No FCA US Customer-Specific Requirement for this section.

5.1.1.3 Process owners
No FCA US Customer-Specific Requirement for this section.

5.1.2 Customer focus
No FCA US Customer-Specific Requirement for this section.

5.2 Quality policy
No FCA US Customer-Specific Requirement for this section.

5.2.1 Establishing the quality policy
No FCA US Customer-Specific Requirement for this section.

5.2.2 Communicating the quality policy
No FCA US Customer-Specific Requirement for this section.

5.3 Organizational roles, responsibilities and authorities
No FCA US Customer-Specific Requirement for this section.

5.3.1 Organizational roles, responsibilities, and authorities – supplemental
The organization shall create and maintain records for all applicable professional roles in the FCA US application Supplier Information Card (SIC) (7.2.2).

5.3.2 Responsibility and authority for product requirements and corrective actions
No FCA US Customer-Specific Requirement for this section.

6 Planning for the quality management system

6.1 Actions to address risks and opportunities

6.1.2.1 Risk analysis
No FCA US Customer-Specific Requirement for this section.

6.1.2.2 Preventive action
No FCA US Customer-Specific Requirement for this section.
6.1.2.3 Contingency plans
No FCA US Customer-Specific Requirement for this section.

6.2 Quality objectives and planning to achieve them
6.2.1
No FCA US Customer-Specific Requirement for this section.
6.2.2
No FCA US Customer-Specific Requirement for this section.
6.2.2.1 Quality objectives and planning to achieve them – supplemental
No FCA US Customer-Specific Requirement for this section.

6.3 Planning of changes
No FCA US Customer-Specific Requirement for this section.

7 Support

7.1 Resources
No FCA US Customer-Specific Requirement for this section.
7.1.1 General
No FCA US Customer-Specific Requirement for this section.
7.1.2 People
No FCA US Customer-Specific Requirement for this section.
7.1.3 Infrastructure
No FCA US Customer-Specific Requirement for this section.
7.1.3.1 Plant, facility, and equipment planning
No FCA US Customer-Specific Requirement for this section.
7.1.4 Environment for the operation of processes
No FCA US Customer-Specific Requirement for this section.
7.1.4.1 Environment for the operation of processes – supplemental
No FCA US Customer-Specific Requirement for this section.
7.1.5 Monitoring and measuring resources

No FCA US Customer-Specific Requirement for this section.

7.1.5.1.1 Measurement system analysis

No FCA US Customer-Specific Requirement for this section.

7.1.5.2 Measurement traceability

No FCA US Customer-Specific Requirement for this section.

7.1.5.2.1 Calibration/verification records

No FCA US Customer-Specific Requirement for this section.

7.1.5.3.1 Internal laboratory

No FCA US Customer-Specific Requirement for this section.

7.1.5.3.2 External laboratory

No FCA US Customer-Specific Requirement for this section.

7.1.6 Organizational knowledge

No FCA US Customer-Specific Requirement for this section.

7.2 Competence

No FCA US Customer-Specific Requirement for this section.

7.2.1 Competence – supplemental

No FCA US Customer-Specific Requirement for this section.

7.2.2 Competence – on-the-job training

FCA computer applications

Each location shall have a sufficient number of individuals competent in the use of computer applications necessary for direct support of FCA US production and service operations during scheduled FCA US operating times, and other FCA US computer applications during normal business hours.

Where FCA US computer applications are specified for use by more than one organization operational area (e.g. GIM use by both manufacturing and material supply), each area shall have individuals trained and available for direct support of FCA US during scheduled operating times.

The specific computer applications required will vary with the scope of an organization site’s operations.

For Production and Mopar manufacturing sites, the recommended applications include, but are not limited to:

- 3CPR – Third Party Containment and Problem Resolution.
- beSTandard – global standards database used by FCA US.
- CITS – Consignment Inventory Tracking System
NOTES:
1. All applications listed above are accessible through eSupplierConnect (8.2.1.1)

2. FCA US periodically offers training to organization personnel on selected FCA US processes and procedures (including those referenced in this document), during Supplier Training Week. Information on content, scheduling and registration is available in the “Supplier Learning Center” application in eSupplierConnect.

Defeat device awareness and prevention

Organizations that provide any emission-related or emission-impacting goods or services to FCA US vehicles that impact, or could impact:

1. the disclosure or implementation of auxiliary emission control devices (AECD), auxiliary emission strategies (AES), or base emission strategies (BES); or

2. goods or services that potentially could be, contain, or create hardware, software, or a design that could be, contain, or create a defeat device;

shall, in accordance with CEP-A0782;

3. acquire from FCA US the Defeat Device and Prevention training module;
4. develop and implement a process to create awareness of and emphasize the importance of requiring organization’s employees and suppliers who participate in organization’s supply of emission-related or emission-impacting goods or services to FCA US to take such Defeat Device Awareness and Prevention Training; and

5. ensure such organization’s employees and suppliers take and complete the Defeat Device Awareness and Prevention Training annually.

7.2.3 Internal auditor competency
No FCA US Customer-Specific Requirement for this section.

7.2.4 Second-party auditor competency
No FCA US Customer-Specific Requirement for this section.

7.3 Awareness
No FCA US Customer-Specific Requirement for this section.

7.3.1 Awareness – supplemental
No FCA US Customer-Specific Requirement for this section.

7.3.2 Employee motivation and empowerment
No FCA US Customer-Specific Requirement for this section.

7.4 Communication
No FCA US Customer-Specific Requirement for this section

7.5 Documented information
No FCA US Customer-Specific Requirement for this section.

7.5.1 General
No FCA US Customer-Specific Requirement for this section.

7.5.1.1 Quality management system documentation
No FCA US Customer-Specific Requirement for this section.

7.5.2 Creating and updating
No FCA US Customer-Specific Requirement for this section.

7.5.3 Control of documented Information
No FCA US Customer-Specific Requirement for this section.
7.5.3.2.1 Record retention

Organization-controlled records

Records identified in this document as “organization-controlled” are documented information as defined in ISO 9000:2015 (3.8.6):

“Information required to be controlled and maintained by an organization and the medium on which it is contained.”

Organization-controlled records shall be made available for review upon request by FCA US or the Certification Body.

Minimum retention requirements

Retention of Design Verification (DV) and Production Validation (PV) data, records and samples shall conform to the requirements of PF-8500.

Quality performance records (e.g. control charts, inspection and test results) shall be retained for one calendar year after the year in which they were created.

Records of internal quality system audits and management review shall be retained for three years.

7.5.3.2.2 Engineering specifications

No FCA US Customer-Specific Requirement for this section.

8 Operation

8.1 Operational planning and control

No FCA US Customer-Specific Requirement for this section.

8.1.1 Operational planning and control — supplemental

No FCA US Customer-Specific Requirement for this section.

8.1.2 Confidentiality

No FCA US Customer-Specific Requirement for this section.

8.2 Determination of requirements for products and services

No FCA US Customer-Specific Requirement for this section.

8.2.1 Customer communication

No FCA US Customer-Specific Requirement for this section.
8.2.1.1 Customer communication — supplemental

The organization shall establish a connection for electronic communication with FCA US through eSupplierConnect.

NOTE: Instructions for registering for the portal and assistance with its use are found at https://fcagroup.esupplierconnect.com

8.2.2 Determination of requirements related to products and services

No FCA US Customer-Specific Requirement for this section.

8.2.2.1 Determining the requirements for products and services – supplemental

No FCA US Customer-Specific Requirement for this section.

8.2.3 Review of requirements related to the products and services

8.2.3.1

The organization shall conduct a review of the provided Additional Quality Requirements (AQR) in accordance with SQ.00001 and the Master Process Failure Mode and Effects Analysis (MPFMEA) documents in accordance with SQ.00007 prior to responding to any Source Package tendered by FCA US.

Organizations that propose providing products or services for any Electric/Electronic (EE) devices included into the subsystems of a specific vehicle shall review the associated Electrical Technical Specification (ETS) issued by FCA US Engineering and evaluate its abilities to meet the product and process requirements prior to responding to any Source Package tendered by FCA US. The completed evaluation shall be a product design input (8.3.3.1).

8.2.3.1.1 Review of the requirements for products and services — supplemental

No FCA US Customer-Specific Requirement for this section.

8.2.3.1.2 Customer-designated special characteristics

FCA US has identified a series of classifications to identify all characteristics of parts, components or systems. These are summarized in Table 3:
TABLE 3: Classification of Special Characteristics

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>REGULATORY</td>
<td>Regulatory characteristics have an impact on the safety or emissions performance of the vehicle or are expected to be important for vehicle homologation.</td>
</tr>
<tr>
<td>CRITICAL</td>
<td>Deviation from the required specifications of critical characteristics may compromise the efficiency or use of the product by the customer.</td>
</tr>
<tr>
<td>CAPABILITY</td>
<td>Deviation from the required specification of capability characteristics may cause potential problems with efficiency, use, or vehicle assembly. These characteristics are used primarily to establish product capability and to aid root cause analysis.</td>
</tr>
<tr>
<td>ORDINARY</td>
<td>Features affecting the function of the part.</td>
</tr>
</tbody>
</table>

Characteristics typed as Regulatory, Critical or Capability are identified with special symbols on FCA US Engineering source documentation.

Use of these characteristic classifications for FCA US parts, components or systems shall conform to CEP-12679.

8.2.3.1.3 Organization manufacturing feasibility

No FCA US Customer-Specific Requirement for this section.

8.2.3.2

AQR and MPFMEA reviews conducted in compliance with 8.2.3.1 shall be retained as organization-controlled records (7.5.3.2.1). ETS evaluations conducted in compliance with 8.2.3.1 shall be retained as organization-controlled records and updated as required (8.2.4).

8.2.4 Changes to requirements for products and services

No FCA US Customer-Specific Requirement for this section.

8.3 Design and development of products and services

8.3.1 General

No FCA US Customer-Specific Requirement for this section.

8.3.1.1 Design and development of products and services – supplemental

No FCA US Customer-Specific Requirement for this section.

8.3.2 Design and development planning

No FCA US Customer-Specific Requirement for this section.

8.2.4 Changes to requirements for products and services
8.3.2.1 Design and development planning – supplemental

FCA US uses the Advance Quality Planning and Production Part Approval process (documented in SQ.00010 Advance Quality Planning (AQP) and Production Part Approval Process (PPAP)), to identify and manage product development tasks that are critical to quality. When required, organizations shall participate in teams to develop parts or components and shall use AQP/PPAP.

A FCA US-led AQP/PPAP program shall be performed for parts that have a Customer-monitored (high or medium) initial risk as identified by the FCA US Supplier Operations Engineer (SOE). Supplier-monitored (low risk) parts shall have an organization-led program, unless otherwise specified by the SOE. Parts that have been out of production for 12 months or more shall have an organization-led AQP/PPAP unless otherwise determined by the SOE. AQP shall be completed prior to providing Pre-Series (PS) level parts to FCA US and shall be completely approved prior to a PPAP submission.

In the event that use of AQP/PPAP is not required, organizations shall develop products according to the Advanced Product Quality Planning (APQP) Process.

8.3.2.2 Product design skills

No FCA US Customer-Specific Requirement for this section.

8.3.2.3 Development of products with embedded software

All organizations providing software embedded in electronic subcomponents of production and service parts and components supplied to FCA US shall undergo an assessment of software process capability/maturity in accordance with CS.00187.

8.3.3 Design and development Inputs

No FCA US Customer-Specific Requirement for this section.

8.3.3.1 Product design input

No FCA US Customer-Specific Requirement for this section.

8.3.3.2 Manufacturing process design input

The organization shall include AQR and MPFMEA provided by FCA US as inputs to manufacturing process design.

8.3.3.3 Special characteristics

The organization shall document the equivalence of the internal special characteristics symbols with FCA US equivalent symbols and reference the equivalence when the organization uses internal symbols in its communications with FCA US.

8.3.4 Design and development controls

No FCA US Customer-Specific Requirement for this section.

8.3.4.1 Monitoring

No FCA US Customer-Specific Requirement for this section.
8.3.4.2 Design and development validation

Design Verification (DV) and Production Validation (PV) shall be conducted in conformance with PF-8500.

Design Verification (DV) and Production Validation (PV) shall be satisfactorily completed before AQP and PPAP approval.

NOTE: Guidance on the extent of required PV testing is provided by the PPR/PA tool Production Validation Testing Scope.

8.3.4.3 Prototype programme

No FCA US Customer-Specific Requirement for this section.

8.3.4.4 Product approval process

Process Audit

A systematic and sequential review of the organization’s process shall be completed through a Process Audit (PA) performed by the FCA SOE and Product Engineer prior to a PPAP submittal. The purpose is to verify the organization’s process readiness and to assure understanding of complete program requirements.

Production Part Approval Process

8.3.5 Design and development outputs

Organizations preparing DFMEAs should follow the AIAG Potential Failure Mode and Effects Analysis (FMEA). The AIAG/VDA Failure Mode and Effects Analysis (FMEA), Design FMEA and Process FMEA Handbook may be used, with analysis documented on the alternate form (Form B).

Organizations that provide any emission-related or emission-impacting goods or services to FCA US vehicles that impact, or could impact:

1. The disclosure or implementation of auxiliary emission control devices (AECD), auxiliary emission strategies (AES), or base emission strategies (BES); or
2. Goods or services that potentially could be, contain, or create hardware, software, or a design that could be, contain, or create a defeat device;

shall develop and implement a procedure to comply with CEP-A0782.

8.3.5.1 Design and development outputs – supplemental

No FCA US Customer-Specific Requirement for this section.
8.3.5.2 Manufacturing process design output
PFMEAs and control plans are required for prototype, pre-launch, and production phases. PFMEA and Control Plan documentation shall be audited to the PFMEA and Control Plan Document Audit Form. Control Plans shall be verified to the Control Plan Process Audit Checklist, with corrective action for any identified nonconformance(s) documented on the associated PDCA Planning Worksheet. A FCA US representative’s signature is not required on Control Plans, unless specifically requested by the SOE.

Organizations preparing PFMEAs should follow the AIAG *Potential Failure Mode and Effects Analysis (FMEA)*. The AIAG/VDA *Failure Mode and Effects Analysis (FMEA), Design FMEA and Process FMEA Handbook* may be used, with analysis documented on the alternate form (Form G).

8.3.6 Design and development changes
No FCA US Customer-Specific Requirement for this section.

8.3.6.1 Design and development changes – supplemental
No FCA US Customer-Specific Requirement for this section.

8.4 Control of externally provided products and services
No FCA US Customer-Specific Requirement for this section.

8.4.1 General

8.4.1.1 General - supplemental
No FCA US Customer-Specific Requirement for this section.

8.4.1.2 Supplier selection process
With respect to suppliers to the organization (“sub-tier suppliers”), the organization shall:

- Conduct an on-site Process Audit (or equivalent) and Production Demonstration Run (PDR) for all parts/suppliers that are NOT considered by FCA US or the organization to be low risk to the vehicle program.
- Develop and maintain a list of approved suppliers for each sub-component, raw material, commodity, technology, or purchased service that is not Consigned or Directed by FCA US. The organization shall have a documented process and use assigned personnel to monitor and manage performance.

8.4.1.3 Customer-selected sources (Directed Parts / Consigned Parts)
For both Directed Parts and Consigned parts, FCA US is responsible for leading the Advance Quality Planning (Process Planning Review for some existing programs), Process Audit, and PDR activities up to and including PPAP, with input from and participation of the organization.

If the organization receives Directed parts or materials, the organization is responsible for managing the on-going quality of the supplier components following PPAP, working with FCA US to resolve issues.
If the organization receives Consigned parts or materials, FCA US is responsible for managing the ongoing quality of the supplier components following PPAP, with input from and participation of the organization.

8.4.2 Type and extent of control of external provision

No FCA US Customer-Specific Requirement for this section.

8.4.2.1 Type and extent of control – supplemental

No FCA US Customer-Specific Requirement for this section.

8.4.2.2 Statutory and regulatory requirements

See Section 4.4.1.2 for guidance on implementing safety compliance processes for the United States.

8.4.2.3 Supplier quality management system development

Management of Supplier Quality Management System (QMS) Development

Supplier QMS development effectiveness shall be evaluated on the basis of evidence that the organization has processes in place that include such elements as:

- Supplier QMS development strategy (8.4.2.5), using risk-based thinking to establish:
  - Minimum and target development levels for each supplier.
  - Criteria for designating “exempt” suppliers.
  - Criteria for granting waivers to select suppliers for compliance to specified elements of ISO 9001 or IATF 16949.
- Second-party audit administration (8.4.2.4.1).
  - Identification of second-party auditors.
  - Criteria for granting self-certification status to qualified suppliers.
  - A schedule for second-party audits.
- Organization-controlled record keeping (7.5.3.2.1).
- Progress monitoring.

At a minimum, the organization shall require their non-exempt suppliers to demonstrate compliance to ISO 9001 and MAQMSR.

NOTE: Organizations requiring additional guidance on supplier QMS development should refer to CQI-19: Sub-tier Supplier Management Process Guideline.

Minimum Automotive Quality Management System Requirements for Sub-Tier Suppliers (MAQMSR)

The organization shall prioritize the QMS development program for non-exempt suppliers to introduce compliance to the Minimum Automotive Quality Management System Requirements for Sub-Tier Suppliers (MAQMSR), as the first step beyond compliance with ISO 9001 or certification to ISO 9001.
Ship-Direct Suppliers

Organizations may, with FCA US Purchasing concurrence, identify a supplier location within FCA Purchasing systems as an organization manufacturing site. (Such a designation allows direct shipment of manufactured goods to FCA US). Unless otherwise specified by FCA US, such sites shall be subject to the registration requirements described in Section 1.2.

In the event that FCA US chooses to grant such a supplier site an exemption to IATF 16949 registration,

- The site shall receive the highest priority for QMS development.
- The site shall not be designated “exempt”, or a “waiver” shall not be granted, without the written concurrence of FCA US Supplier Operations.

Suppliers Certified to IATF 16949

Supplier QMS certification by an IATF-recognized Certification Body to IATF 16949 completely satisfies the requirements for quality management system development. Further QMS development by the organization is not required while the supplier’s certification is valid.

If the supplier certification expires, or if is cancelled or withdrawn by their Certification Body, the organization shall establish and implement a plan for second-party audits to ensure continued compliance to IATF 16949 until the supplier is recertified.

Exemption shall not be granted as an alternative to recertification without approval from FCA US Supplier Operations management.

8.4.2.3.1 Automotive product-related software or automotive products with embedded software

All suppliers to the organization providing software embedded in electronic subcomponents of production and service parts and components supplied to FCA US shall undergo an assessment of software process capability/maturity in accordance with CS.00187.

8.4.2.4 Supplier monitoring

No FCA US Customer-Specific Requirement for this section.

8.4.2.4.1 Second-party audits

Second Party Audit Administration

The second party must annually audit each non-exempt supplier for whom it has performed the second party service.

- For suppliers not certified to ISO 9001, the duration of these audits must conform to the full application of the audit day requirements of the Rules, Section 5.2.
- For ISO 9001 certified suppliers, audit length may vary to suit individual supplier requirements and audit resource availability in accordance with the documented development strategy.

Audit reports shall be retained as organization-controlled records (7.5.3.2.1).

The following second party qualifications shall apply:
1. The organization must be certified to IATF 16949:2016 by an IATF-recognized Certification Body.

2. The IATF 16949 certification of the second party cannot be in “suspended” status.

Supplier self-certification

If the organization has suppliers for whom self-certification is an effective alternative to second-party audits for QMS development, the organization shall have a documented process for identifying and qualifying self-certifiable suppliers. Qualification criteria shall include a preliminary evaluation (audit) of the supplier’s QMS, an analysis of the supplier’s quality performance and an assessment of the incremental risk to organization products.

Self-certification qualifications shall be documented and subject to periodic review. Such documents shall be managed as organization-controlled records (7.5.3.2.1).

8.4.2.5 Supplier development

Supplier exemptions / waivers

The organization strategy for supplier development of its active suppliers shall include a documented process for designating “exempt” suppliers – those suppliers who are unable or unwilling to fully certify a quality management system to IATF 16949 or ISO 9001.

The organization development strategy shall include provisions for granting partial exemptions (“waivers”) to suppliers providing commodities for which specific sections of ISO 9001 or IATF 16949 do not apply.

Except as noted in Section 8.4.2.3, declaring a supplier as “exempt” does not relieve the organization of the responsibility for supplier QMS development for any sections of ISO 9001 or IATF 16949 not explicitly waived.

Supplier development prioritization, exemption and waiver decisions, as well as the scope of individual exemptions or waivers, shall be documented and subject to periodic review. This documentation shall be retained as an organization-controlled record.

Performance Complaints

To ensure continuing conformance to all FCA US requirements, the organization shall implement a program to pursue supplier development for supplier manufacturing sites whose open performance issues directly impact FCA US operations. The program should include a procedure to pursue systemic corrective action from IATF16949-certified suppliers by preparing and submitting a performance complaint in accordance with Section 8.0 of the Rules, using the procedure outlined in SQN-A1024.

NOTE: This requirement does not apply to suppliers providing Consigned parts or materials (8.4.1.3).

Organizations may submit performance complaints against IATF 16949-certified suppliers for open performance issues not directly impacting FCA US operations without FCA US participation or consultation, using any internally-developed, Rules-compliant procedure.
8.4.3 Information for external providers
No FCA US Customer-Specific Requirement for this section.

8.4.3.1 Information for external providers – supplemental
With respect to external providers to the organization (i.e. “sub-tier suppliers”), the organization shall:

- Cascade and communicate all FCA US quality requirements (e.g., Quality Planning, Process Audit, PDR, Forever Requirements, etc.) throughout the organization’s supply chain.
- Initiate a Forever Requirement Notice for any proposed process change throughout the supply chain.

8.5 Production and service provision
8.5.1 Control of production and service provision
No FCA US Customer-Specific Requirement for this section.

8.5.1.1 Control plan
No FCA US Customer-Specific Requirement for this section.

8.5.1.2 Standardised work – operator instructions and visual standards
No FCA US Customer-Specific Requirement for this section.

8.5.1.3 Verification of job set-ups
No FCA US Customer-Specific Requirement for this section.

8.5.1.4 Verification after shutdown
No FCA US Customer-Specific Requirement for this section.

8.5.1.5 Total productive maintenance
No FCA US Customer-Specific Requirement for this section.

8.5.1.6 Management of production tooling and manufacturing, test, inspection tooling and equipment
No FCA US Customer-Specific Requirement for this section.

8.5.1.7 Production scheduling
No FCA US Customer-Specific Requirement for this section.

8.5.2 Identification and traceability
No FCA US Customer-Specific Requirement for this section.

8.5.2.1 Identification and traceability - supplemental
Organizations shall conform with PF.901106 when providing parts or components:
• That require tracking to ensure emission, certification and regulatory compliances.
• That are designated as high-theft components for law enforcement needs.

8.5.3 Property belonging to customers or external providers
No FCA US Customer-Specific Requirement for this section.

8.5.4 Preservation
No FCA US Customer-Specific Requirement for this section.

8.5.4.1 Preservation – supplemental
Organizations shall be familiar and comply with FCA US packaging, shipping and labeling requirements contained in the Packaging and Shipping Instructions manual.

8.5.5 Post-delivery activities
No FCA US Customer-Specific Requirement for this section.

8.5.5.1 Feedback of information from service
No FCA US Customer-Specific Requirement for this section.

8.5.5.2 Service agreement with customer
No FCA US Customer-Specific Requirement for this section.

8.5.6 Control of changes
No FCA US Customer-Specific Requirement for this section.

8.5.6.1 Control of changes – supplemental
The organization shall comply with the Forever Requirements activities described in SQ.00012 Forever Requirements.

8.5.6.1.1 Temporary change of process controls
No FCA US Customer-Specific Requirement for this section.

8.6 Release of products and services
No FCA US Customer-Specific Requirement for this section.

8.6.1 Release of products and services — supplemental
No FCA US Customer-Specific Requirement for this section.
8.6.2 Layout inspection and functional testing

Layout Inspection - Production

To ensure continuing conformance to all FCA US requirements, the organization shall implement a program to conduct a complete layout inspection of all organization-manufactured parts and components including all subcomponents.

Unless otherwise specified by FCA US Engineering and Supplier Operations, the reference standard for layout inspections shall be the FCA US Engineering source documentation. The approved Control Plan shall also be used where applicable.

For dimensional characteristics identified on the Control Plan as Critical (8.2.3.1.2), the organization shall conduct a monthly dimensional study in accordance with QR-10012 and SPB-00001-09.

The frequency of layout inspections for non-critical characteristics of production parts and components shall be established following an assessment of risk to product quality. In the absence of risk analysis, the inspections shall be conducted annually.

Evaluation of program effectiveness shall be based on evidence that the organization has a process in place that includes elements such as:

- An assessment of risk of nonconformance (6.1.1, 6.1.2, 6.1.2.1).
- An established inspection schedule.
- Qualified inspectors identified and employed (7.2.3).
- Conformance evaluation of non-consigned, externally-provided subcomponents (8.4.2, 8.4.2.1).
- A defined corrective action process, including:
  - Customer notification of nonconformance (8.7.1.6).
  - Corrective actions (8.7.1).
  - Verification of corrective action effectiveness.
- Record retention (7.5.3.2.1).

Inspection frequencies greater than one year require a written waiver by FCA US Supplier Operations. Any such waiver shall be subject to annual review and renewal. Documented evidence of the waiver shall be retained as an organization-controlled record.

Layout Inspection - Service

The frequency and extent of layout inspections for service parts and components shall be established by the organization with the written approval of Mopar Supplier Quality. Documented evidence of the approved layout inspection plan shall be retained as an organization-controlled record. In the absence of a written agreement, a production-level inspection program (per above) is required.
8.6.3 Appearance items
Organizations that provides appearance items – parts or components whose color, gloss or surface finish requirements are specified by the FCA US Product Design Office – shall conform with AS-10119.

The FCA US Product Design Office specifies and controls all appearance masters. Samples of appearance masters are available from the Thierry Corporation: http://www.thierry-corp.com [(248) 549-8600 (USA), 49 711-839974-0 (Germany)].

8.6.4 Verification and acceptance of conformity of externally provided products and services
No FCA US Customer-Specific Requirement for this section.

8.6.5 Statutory and regulatory conformity
See Section 4.4.1.2 for guidance on implementing safety compliance processes for the United States.

8.6.6 Acceptance criteria
No FCA US Customer-Specific Requirement for this section.

8.7 Control of nonconforming process outputs, products and services

8.7.1
No FCA US Customer-Specific Requirement for this section.

8.7.1.1 Customer authorization for concession
The organization shall obtain written approval from FCA US Engineering and Supplier Operations prior to implementing procedures for repair or reuse.

8.7.1.2 Control of nonconforming product – customer specified process
The organization shall use the NCT System as directed by FCA US to manage potentially nonconforming and nonconforming material shipped to FCA US facilities (assembly plants, powertrain plants, stamping plants, Mopar parts depots), as well as Extension of Plant (EOP) operations and Module Suppliers. The organization shall also comply with all applicable process requirements specified in SQN-A0469 Supplier NC Management – North America.

When directed by FCA US for the containment of nonconforming material, the organization shall comply with all program policies and project requirements for the 3CPR Web Based System, as specified in the General Terms and Conditions and documented in SQN-A0489 Third Party Containment and Problem Resolution (3CPR).

8.7.1.3 Control of suspect product
Parts and components marked for obsolescence on a FCA US Engineering CN (change notice) shall be classified and controlled as nonconforming product. The organization shall disposition such parts and components in accordance with Section 8.7.1.7.
8.7.1.4 Control of reworked product
The organization shall obtain written approval from FCA US Engineering and Supplier Operations prior to implementing procedures for rework.

8.7.1.5 Control of repaired product
No FCA US Customer-Specific Requirement for this section.

8.7.1.6 Customer notification
No FCA US Customer-Specific Requirement for this section.

8.7.1.7 Nonconforming product disposition
No FCA US Customer-Specific Requirement for this section.

9 Performance evaluation

9.1 Monitoring, measurement, analysis and evaluation

9.1.1 General
No FCA US Customer-Specific Requirement for this section.

9.1.1.1 Monitoring and measurement of manufacturing processes
No FCA US Customer-Specific Requirement for this section.

9.1.1.2 Identification of statistical tools
No FCA US Customer-Specific Requirement for this section.

9.1.1.3 Application of statistical concepts
No FCA US Customer-Specific Requirement for this section.

9.1.2 Customer satisfaction
Global External Balanced Scorecard
FCA US Purchasing uses the Global External Balanced Scorecard (GEBSC) to evaluate customer satisfaction with its external production and service (Mopar) suppliers. The Production report displays ratings for five Operational Metrics:
- Incoming Material Quality (IMQ)
- Delivery.
- Warranty.
- Cost.
- Overall.
The Mopar report displays ratings for three Operational Metrics:
The metrics used by FCA US to evaluate the performance of the organization’s quality management system are IMQ, Delivery and Warranty (where applicable). The remaining Operational Metrics and the Strategic Metrics shall not be used.

NOTES:
2. The GEBSC display “By Location/Material Group” evaluates organization site performance at a commodity level.

Supplier Quality Reporting
FCA US may provide Certification Bodies with periodic reports of their clients’ quality data, such as GEBSC Incoming Material Quality (IMQ), Delivery and Warranty metrics with supporting data.

NOTE: Sharing CB client quality data does not constitute an OEM performance complaint as described in Section 8.1 of the Rules.

9.1.2.1 Customer satisfaction – supplemental

OEM Performance Complaint
FCA US may file an OEM performance complaint when confronted with a specific organization-responsible quality performance issue, where a root cause may be a nonconformance in the organization’s quality management system.

FCA US shall initiate an OEM performance complaint by sending the appropriate Oversight office a notification letter that will:

- Identify the organization site and their Certification Body.
- Summarize substance of the complaint.
- Document the affected element(s) of IATF 16949.
- Request a copy of the organization site’s last audit report.
  NOTE: As FCA US is an IATF member; a request for client audit reports is permitted under Section 3.1.e of the Rules.
- Request the Oversight office witness the Special Audit conducted to verify implementation of corrective action.

Upon receipt of the OEM performance complaint notification letter from the Oversight office, the CB shall investigate the complaint in accordance with Section 8.0 of the Rules.
An OEM performance complaint may be filed in conjunction with, or independently of, a TPSL action. The CB findings from an OEM complaint investigation may be used by FCA US to establish the need to place an organization site in TPSL or New Business Hold.

**Top Problem Supplier Location Reporting**

Upon periodic review of GEBSC quality measures and other key performance indicators, FCA US may notify specific organization sites that they have been identified as a Top Problem Supplier Location (TPSL). The TPSL designation signals FCA US dissatisfaction with the organization site’s quality performance, and begins a process to develop and implement a performance improvement plan.

FCA US shall notify the Certification Body of the organization site’s involvement in the TPSL process by sending the CB a copy of the notification letter and follow-up communications (as required) that will:

- Identify the organization site.
- Summarize the process.
- Document specific areas of concern, with supporting data.
- Request a copy of the organization site’s last audit.

**NOTE:** As FCA US is an IATF member; a request for client audit reports is permitted under Section 3.1.e of the *Rules*.

Certification Body notification of TPSL activity is for information only and does not constitute an OEM performance complaint as described in Section 8.1 of the *Rules*. However, FCA US reserves the right to file a performance complaint at any point within the TPSL process.

FCA US shall notify the Certification Body when the organization site has achieved the agreed-upon exit criteria and is removed from the TPSL process.

**Quality New Business Hold**

Upon periodic review of GEBSC quality measures and other key performance indicators, FCA US may notify an organization that they have been placed in Quality New Business Hold (QNBH) status. This indicates that the organization site’s quality performance is persistently below expectations and corrective action is required.

**NOTE:** While in QNBH status, the organization will be ineligible to bid on new FCA US business supplied from the affected organization site(s) without Purchasing Senior Management intervention.

A notification letter is sent to the organization, outlining the substance of the complaint and identifying the exit criteria the organization must achieve to be removed from QNBH status. FCA US will file an OEM Performance Complaint in a separate letter sent to the Oversight office of the organization’s Certification Body (CB) via electronic mail.

Upon completion of the process in accordance with Section 8.0 of the *Rules*, the organization will remain in QNBH status while FCA US monitors GEBSC quality measures and other key performance indicators. When the QNBH exit criteria established for the organization have been met, FCA US shall:
- Remove the Quality New Business Hold status, lifting the associated commercial and quality sanctions. (Sanctions imposed by other FCA US processes may remain in place.)

- Notify the affected organization site(s), the CB and the Oversight Office.

If the CB withdraws the certificate upon completion of the process in accordance with Section 8.0 of the Rules, FCA US Purchasing management will develop a joint plan for the organization that either restricts further commercial activity or works toward improving processes and performance to a level that supports organization efforts to recertify.

If an organization site is seeking certification to IATF 16949, but is placed on QNBH status before the Stage 2 audit is conducted, the CB shall not conduct a stage 2 audit until the QNBH status is lifted or FCA US Supplier Operations management notifies the organization and the CB in writing that the Stage 2 audit may proceed.

If an organization site is placed on QNBH status after a Stage 2, transfer, transition or recertification audit, but before the certificate is issued:

- The CB shall immediately suspend the existing certificate, if applicable.

- The CB shall issue the new certificate in accordance with the Rules.

- The CB shall then immediately place the new certificate in suspension in accordance with the Rules. If applicable, the suspension of the previous certificate shall be removed.

Material Management Operations Guideline /Logistics Evaluation (MMOG/LE)

Organizations providing production and service parts to FCA US shall use MMOG/LE – Version 5 to integrate evaluation of delivery performance into their quality management system by conducting an annual self-assessment, using the “Full” assessment tool.

The completed assessment shall be submitted to FCA US between May 1 and July 31 of the current calendar year. Organizations may submit the assessment through the DRIVe system (accessible through eSupplierConnect), or email FCA US a copy of the completed assessment in the new web based MMOG/LE.np ecosystem using the following FCA US customer information and mailbox:

- Company Name: FCA US LLC
- Address: 800 Chrysler Drive
- City, State, Zip Code: Auburn Hills, MI 48326
- Country: US
- MMOG Mailbox Address: odette-5434@mail2.mmogle.com

Questions concerning MMOG/LE should be directed to FCA US Supplier Delivery Development at scmsdd@fcagroup.com.

9.1.3 Analysis and evaluation

No FCA US Customer-Specific Requirement for this section.
9.1.3.1 Prioritization

No FCA US Customer-Specific Requirement for this section.

9.2 Internal audit

9.2.1

No FCA US Customer-Specific Requirement for this section.

9.2.2

Layered Process Audits

Organizations supplying production parts or components to FCA US shall conduct Layered Process Audits (LPA) on all elements of manufacturing and assembly lines that produce production parts or components for FCA US. These shall include both Process Control Audits (PCA) and Error Proofing Verification (EPV) audits.

Organizations shall provide evidence of compliance to the following requirements:

- Audit process shall involve multiple levels of site management, from line supervisor up to the highest level of senior management normally present at the organization site.

- A member of site senior management shall conduct process control audits at least once per week. All members of site senior management shall conduct process control audits on a regular basis.

- Delegation of this activity will not be accepted with the exception of extenuating circumstances. Note: Frequent travel is an example of an extenuating circumstance. Site management personnel whose responsibilities include frequent travel may be excused from scheduled participation in layered process audits, but should participate whenever possible.

- The organization shall have a documented audit structure with auditor level and frequency of inspection.

- PCAs shall be conducted at least once per shift for build techniques and craftsmanship related processes.

- EPV audits shall be conducted at least once per shift, preferably at the start of shift. Compliance charts shall be completed once per quarter and maintained for the life of the program. The following metrics shall be included:
  - Audit completion by all auditing layers.
  - By-item percentage conformance by area.

- Reaction plans shall be in place to immediately respond to nonconformances and implement corrective actions (10.2.1).

A separate communication procedure is required to address reoccurring non-conformances. Specific areas of focus shall include the following:
• Resolution of non-conformances, including lessons learned (10.2.3).

• Escalation of issue for management review (9.3.2).

Layered process audits are not required for specific materials, parts or assemblies produced on such an infrequent or irregular basis that it would prohibit establishing a regular, weekly audit schedule.

• Such infrequently or irregularly produced materials, parts or assemblies shall be subject, at a minimum, to a process audit at start-up and shutdown of each production run.

• Organizations shall evaluate and document the applicability of this exception for each material, part or assembly under consideration based upon the production schedule for all customers.

• The evaluation document shall be maintained as an organization-controlled record (7.5.3.2.1); reviewed annually and updated as required.

Organizations shall use CQI-8: Layered Process Audits Guideline, 2nd Edition to establish a Layered Process Audit program. The program shall be administered under the guidance of a competent manufacturing process auditor as defined in IATF 16949 Sanctioned Interpretation no.4 for Section 7.2.3.

9.2.2.1 Internal audit programme

No FCA US Customer-Specific Requirement for this section.

9.2.2.2 Quality management system audit

The scope of the annual audit program shall include a review of a minimum of two Product Control Plans for FCA US parts, where applicable.

9.2.2.3 Manufacturing process audit

Special Process Assessments

Organizations shall evaluate the effectiveness of each of the applicable special processes listed below with the associated AIAG manual:

• Coating – CQI-12 Special Process: Coating System Assessment.

• Soldering – CQI-17 Special Process: Soldering System Assessment.

*See “Special Process Assessments – Additional Considerations” below.

Evaluation of implementation effectiveness shall be based on evidence that the organization has a process in place that includes elements such as:
• Qualified auditors identified and employed (7.2.3).
• Schedule for self-assessment in place (including evidence of schedule adherence).
• A defined corrective action process, including:
  o Customer notification of nonconformance (8.7.1.6).
  o Corrective actions (8.7.1).
  o Verification of corrective action effectiveness.
• A continuous improvement process (10.3, 10.3.1).
• Organization-controlled record keeping (7.5.3.2.1).
• Supplier development process (8.4.2.5) identified for applicable suppliers to the organization.

Pursuant to IATF 16949 clauses 8.4.1.3 and 8.4.3.1 together with their associated FCA US Customer-Specific Requirements, this requirement shall also apply to suppliers to the organization who employ the above-listed special processes.

Organizations shall evaluate their manufacturing processes, and the manufacturing processes of their suppliers, to establish and document the scope of applicability of this requirement. This document is an organization-controlled record (7.5.3.2.1). Evaluation shall be by self-assessment. The self-assessment shall be conducted annually, but may be repeated as needed. The self-assessment may be conducted as part of the organization’s internal quality audit or conducted separately.

Assessment by a competent second party auditor (7.2.4) will satisfy the self-assessment requirement for suppliers to the organization.

Special Process Assessments – Additional Considerations

CQI-9 and CQI-15: Organizations shall submit a completed self-assessment to FCA US Supplier Operations on an annual basis.

• Submissions shall be in English
• Submissions shall be identified by:
  o Organization name
  o Organization location
  o Supplier Codes assigned to the location by FCA US Purchasing
  o Year of submission
• Suppliers to an organization (i.e. sub-tier suppliers) may submit completed self-assessments directly to FCA US Supplier Operations after reviewing the self-assessment with their customer.
• Completed assessments shall be submitted to the following SharePoint site: https://collab.nafta.extra.fcagroup.com/sites/psqcentral/CQI9/SitePages/Home.aspx.
CQI-27: Self-assessment program administration are subject to the exemptions identified in Tables 7, 8 and 9 of Appendix B.

9.2.2.4 Product audit

Continuing conformance inspection and tests shall be performed in conformance with to PF-8500 and the Global Product Assurance Testing manual during the model year to assure production items or products continue to meet specified requirements and tolerances unless waived in writing by the FCA US Release Engineer. Any such waiver shall be subject to annual review and renewal.

FCA US may implement a Launch Inspection Program (LIP) project for inspection of organization-sourced parts and material that Supplier Operations suspects may be at risk of nonconformance. Upon implementation of an LRM project, the organization shall cooperate with this FCA US action in accordance with SQN-A0490 Launch Risk Mitigation (LRM).

9.3 Management review

9.3.1 General

No FCA US Customer-Specific Requirement for this section.

9.3.1.1 Management review – supplemental

No FCA US Customer-Specific Requirement for this section.

9.3.2 Management review inputs

9.3.2.1 Management review inputs – supplemental

Output from Customer-Specific Requirements to the following sections shall provide management review input:

- Design and development planning — Supplemental (8.3.2.1)
- Supplier quality management system development (8.4.2.3)
- Customer satisfaction — Supplemental (9.1.2.1)
- Quality management system audit (9.2.2.2)
- Manufacturing process audit (9.2.2.3)
- Automotive Warranty Management (10.2.5)

9.3.3.1 Management review outputs – supplemental

No FCA US Customer-Specific Requirement for this section.

10 Improvement

10.1 General

No FCA US Customer-Specific Requirement for this section.
10.2 Nonconformity and corrective action

The Global Issue Management (GIM) process and system shall be used by all organizations providing parts and components to FCA US to document corrective action, unless otherwise specified by the governing FCA US business process. Application of the GIM process and system (e.g. response timing) shall conform to the governing FCA US business process.

10.2.3 Problem solving

No FCA US Customer-Specific Requirement for this section.

10.2.4 Error-proofing

No FCA US Customer-Specific Requirement for this section.

10.2.5 Warranty management systems

Automotive Warranty Management (AWM)

Organizations providing production and non-exempt service parts and components to FCA US shall support improvement in customer satisfaction through pursuit and achievement of warranty reduction targets established by FCA US, where applicable. This shall be accomplished by active participation in the Supplier Associated Warranty Reduction Program (SAWRP).

Organizations shall use CQI-14: Automotive Warranty Management, 3rd Edition to integrate warranty into their quality management system.

Evaluation of integration effectiveness shall be based on evidence that the organization has a process in place that includes elements such as:

- Qualified auditors identified and employed (7.2.3).
- An established schedule for self-assessment (including evidence of schedule adherence).
- A defined corrective action process, including:
  - Customer notification of nonconformance (8.7.1.6).
  - Corrective actions (8.7.1).
  - Verification of corrective action effectiveness.
- A continuous improvement process (10.3, 10.3.1), including monthly evaluation of organization’s performance to warranty reduction targets established by FCA US.
- Organization-controlled record keeping (7.5.3.2.1).
- A supplier development process (8.4.2.5) identified for applicable suppliers to the organization.

NOTE: When organizations manage warranty at a corporate level, individual organization sites requiring evidence of compliance to this requirement may reference CQI-14 compliant corporate processes as they pertain to the products and processes at their sites.
Evaluation shall be by self-assessment. The self-assessment shall be conducted annually, but may be repeated as needed. The self-assessment may be conducted as part of the organization’s internal quality audit or conducted separately. The self-assessment shall be conducted using the self-assessment spreadsheet tool from CQI-14. The completed spreadsheet shall serve as a record of the self-assessment.

Implementation of Automotive Warranty Management shall proceed in three stages:

1. Organization identifies and implements necessary changes to quality management system processes, trains responsible personnel and conducts initial, “baseline” self-assessment.

2. Organization establishes internal performance goals, develops prioritized corrective action plan to achieve these goals and prepares an assessment schedule.

3. Organization monitors performance, continues with self-assessments and updates corrective action plan as required to meet FCA US requirements and internal improvement goals or maintain goal-level performance.

Implementation timing for organizations (either new suppliers or current suppliers to FCA US) is summarized in Table 4:

**TABLE 4: Implementation timing for Automotive Warranty Management (AWM) requirements**

<table>
<thead>
<tr>
<th>Organization’s relationship to FCA US</th>
<th>Existing Vehicle Program</th>
<th>New Vehicle Program</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Supplier</td>
<td>Complete implementation through Stage 2 within six months of award of business.</td>
<td>Complete implementation through Stage 2 before Commercial Launch.</td>
</tr>
<tr>
<td></td>
<td>Implementation through Stage 3 to follow within six months of start of production.</td>
<td>Implementation through Stage 3 to follow within six months of Commercial Launch.</td>
</tr>
<tr>
<td>Current Supplier</td>
<td>Full implementation through Stage 3 required.</td>
<td>Follow timing for “New Supplier/New Vehicle Program” (above) for new parts or components.</td>
</tr>
</tbody>
</table>

**AWM Exceptions**

The following temporary exceptions apply to organizations that would otherwise be required to implement AWM:

1. Emergency Assumption of Business - Organizations who assume production of parts or components at FCA US’s request under emergency conditions are exempt from AWM requirements for six months for these parts or components. The “New Supplier/Existing Program” requirements (above) shall apply thereafter.

2. Financially Distressed Suppliers - Organizations that have been identified by FCA US Supplier Relations as being financially distressed may, with FCA US Supplier Operations senior management
approval, suspend AWM actions. Such action is considered temporary and will be subject to periodic review by FCA US Supplier Operations and FCA US Supplier Relations.

AWM Exemptions

Organizations that have been identified by FCA US Purchasing management as exempt from IATF 16949 certification are also exempt from FCA US AWM requirements. However, Mopar parts or components installed on production vehicles at an assembly plant, a Mopar Custom Shop or a dealership at time of sale are considered “production” parts and subject to AWM requirements regardless of the organization’s certification status.

Implementation is not required of organizations producing modular assemblies or other products that cannot have warrantable repair assigned to their activity.

Implementation is not required of organizations producing parts or components in commodity groups with historically-low warranty levels. A list of these low warranty commodity groups is available from the FCA US web page “Supplier Warranty Management – WIS, EWT, GCS, QNA”, available in eSupplierConnect.

Organizations whose volume of parts or components supplied in a specific commodity is of low significance may be exempted from FCA US AWM requirements for that commodity. The determination of exemption eligibility for a specific organization-commodity combination is the responsibility of the FCA US Supplier Quality Operations Warranty group.

NOTE: Questions concerning the program eligibility of individual organizations or commodity groups should be directed to the FCA US Supplier Quality Operations Warranty group at sqwarr@fcagroup.com.

10.2.6 Customer complaints and field failure test analysis

Returned Parts Analysis

Organizations that provide production or non-exempt service parts or components shall participate in the review, testing and analysis of returned components in accordance with PS-11346 and shall include an analysis of the interaction of embedded software, if applicable.

Technical Support

Organizations that provide production and non-exempt service parts and components shall provide all necessary support to FCA US in the investigation and resolution of supplier-associated warranty issues.

10.3 Continual Improvement

No FCA US Customer-Specific Requirement for this section.

10.3.1 Continual improvement – supplemental

No FCA US Customer-Specific Requirement for this section.
